

30-DAY POWERPOINT DESIGN CHALLENGE

A Real-World Practice Curriculum for Presentation Designers

CHALLENGE PURPOSE & CORE PRINCIPLE

The goal of this challenge is to help presentation designers master turning realistic, complex, unformatted professional content into visually engaging, interactive PowerPoint presentations. **Core Principle:** The designer's job is to DESIGN. Your job is to provide realistic content briefs. Do not prescribe slide counts, visual layouts, or exact element positions—let the designer interpret the narrative tension and solve the communication problem.

TARGET SKILLS DEVELOPED ACROSS 30 DAYS

Visual Storytelling • Information Hierarchy • Slide Composition • Progressive Disclosure • Shape & Morph Interactions • Before/After Narrative • Timelines & Process Flows • Decision Matrixing • Data Visualisation • Interactive Navigation

Curriculum Matrix (Days 01 – 15)

Day	Profession / Role	Scenario	Story Type	Potential Interaction
Day 01	HR Specialist	Remote onboarding orientation	Concept Overview	Click-to-reveal core pillars
Day 02	Retail Store Manager	Visual merchandising display guide	Standard & Rules	Interactive Before/After display
Day 03	Community Manager	Urban park renovation pitch	Transformation	Interactive plan/map toggle
Day 04	Customer Support Lead	Support escalation protocol	Process / Workflow	Interactive step-by-step flow
Day 05	Fitness Coach	8-week strength roadmap	Progression Journey	Interactive milestone roadmap
Day 06	Event Coordinator	International tech summit logistics	Schedule & Logistics	Interactive tabbed agenda
Day 07	Tech Recruiter	Software engineer candidate journey	Funnel / Experience	Interactive candidate funnel
Day 08	Operations Analyst	E-commerce fulfillment diagnostic	Problem to Solution	Process flow comparison
Day 09	Sales Representative	SaaS CRM vs. legacy software pitch	Feature Comparison	Interactive feature matrix
Day 10	NGO Project Officer	Rural clean water impact report	Impact Story	Interactive metric dashboard
Day 11	UX Researcher	Mobile banking app usability audit	Research Findings	Screen hotspot / pain points
Day 12	Clinical Educator	Antibiotic stewardship brief	Cause & Effect	Diagnostic tree reveal
Day 13	Higher Ed Consultant	First-year STEM retention strategy	Root Cause Analysis	Category drill-down accordion
Day 14	Real Estate Developer	Mixed-use urban center proposal	Proposal & Mitigation	Interactive site plan overlay
Day 15	Financial Planner	Retirement portfolio volatility guide	Strategy & Mindset	Risk/return scenario toggle

Curriculum Matrix (Days 16 – 30)

Day	Profession / Role	Scenario	Story Type	Potential Interaction
Day 16	Brand Strategist	Heritage footwear repositioning	Transformation Pitch	Morph visual evolution journey
Day 17	Cybersecurity Officer	Enterprise phishing defense audit	Scenario / Decision	Interactive "Spot Red Flags" quiz
Day 18	Supply Chain Manager	Microchip supply chain risk brief	Risk & Mitigation	Supply route map comparison
Day 19	Career Coach	Director-to-VP leadership roadmap	Mindset Shift	4-quadrant skill matrix
Day 20	Environmental Scientist	Coastal microplastic pollution study	Ecological Impact	Ecosystem layer drill-down
Day 21	Product Manager	AI features rollout & monetization	Product Strategy	Tiered matrix & timeline
Day 22	Church / Ministry Leader	Community center expansion pitch	Vision & Stewardship	Interactive needs map
Day 23	CISO	Zero-Trust architecture migration	Business Case	Security layer & phase rollout
Day 24	HealthTech Founder	Series A pitch for AI diagnostics	Investment Pitch	TAM/SAM/SOM & timeline
Day 25	Urban Transit Director	Bus Rapid Transit (BRT) conversion	Trade-off Analysis	Corridor layout comparison
Day 26	Hospital CMO	Emergency Dept. patient flow overhaul	Systemic Redesign	Patient journey simulation
Day 27	M&A Consultant	Post-merger fintech integration	M&A Strategy	Synergy matrix & 100-day hub
Day 28	Sustainability Director	Scope 3 supply chain decarbonization	Strategy & Compliance	Carbon footprint waterfall
Day 29	Architectural Director	Cultural center adaptive reuse plan	Architectural Story	Spatial cross-section overlay
Day 30	Legal Compliance Director	Global AI Act regulatory governance	Risk & Governance	Compliance heat-map

PEDAGOGICAL DIFFICULTY PROGRESSION

- **Days 01–05 (Beginner):** Visual hierarchy, basic shapes, simple reveals, visualising bullet points and linear concepts.
- **Days 06–10 (Intermediate):** Workflows, processes, timelines, feature comparison tables, and simple data callouts.
- **Days 11–15 (Advanced):** Professional case studies, research findings, root cause analysis, and multi-layered information grids.
- **Days 16–20 (Expert):** Interactive navigation, decision-making scenarios, multi-stakeholder trade-offs, and transformational narratives.
- **Days 21–25 (Mastery):** Complex business strategy, data + narrative synthesis, commercial business cases, and product roadmaps.
- **Days 26–30 (Portfolio Level):** Multi-million dollar executive client briefs, systemic redesigns, and high-stakes board proposals.

DAY 01

HR Specialist — Remote Onboarding Orientation

SCENARIO & OBJECTIVE

An HR onboarding specialist needs to present core remote culture and perks to new hires during their first-week virtual orientation. Ensure new hires feel welcomed and supported without feeling overwhelmed by policy text.

AUDIENCE

Newly hired remote employees across engineering, marketing, and operations.

CLIENT CONTENT

Starting a remote job can feel isolating. Our remote culture rests on three pillars: Flexibility, Support, and Growth. Flexibility: Core hours 10 AM–3 PM local, \$500 home office setup stipend, and \$75 monthly internet allowance. Support: Designated 90-day Onboarding Buddy and free counseling via Headspace and Modern Health. Growth: \$1,200 annual learning stipend and quarterly hackathons.

MUST COMMUNICATE

- 3 core remote culture pillars
- Financial perks (\$500 setup, \$75 internet, \$1,200 learning)
- 90-day buddy program structure
- Mental health support availability

"Having an Onboarding Buddy made me feel connected from Day 1." — Sarah T.

Final Message: You are trusted from day one, fully equipped to set up your workspace, and never alone.

Designer Freedom: Choose slide count, visual structure, layout, and simple click-to-reveal interactions.

DAY 02

Retail Store Manager — Visual Merchandising Guide

SCENARIO & OBJECTIVE

A boutique manager briefs seasonal floor staff on visual merchandising standards before a holiday sale. Staff must understand display rules to drive high-margin sales.

AUDIENCE

Seasonal retail floor staff and visual merchandisers.

CLIENT CONTENT

When tables look cluttered or sparse, customers walk past. We follow the "Pyramid Display Rule": high-inventory core products at eye level in center, focal accent items at the top, bulk packaged goods at base. Display density must stay between 70% and 100% full. Signage goes top-right, angled 45 degrees to the main aisle. Folded apparel requires 2-inch edge alignment.

MUST COMMUNICATE

- Pyramid Display Rule layers (Top, Eye Level, Base)
- Capacity limits (70% min to 100% max density)
- Signage placement (Top-right at 45° angle)
- 2-inch folded apparel alignment rule

"When main displays look structured, customer dwell time rises by 3 mins." — Marcus, Floor Mgr

Final Message: Visual merchandising is silent selling. Display table precision directly drives sales.

Designer Freedom: Choose slide count, visual structure, layout, and interactive before/after comparisons.

DAY 03

Community Manager — Urban Park Renovation Pitch

SCENARIO & OBJECTIVE

A community manager presents an urban park renovation plan to skeptical local residents. Convince them that the layout balances green space, play areas, and seating without removing mature trees.

AUDIENCE

Local residents, neighborhood association members, and small business owners.

CLIENT CONTENT

Oakridge Park has served us for 40 years, but 65% of infrastructure is broken. Residents fear renovation means cutting trees. Our plan preserves 100% of the 42 heritage oak trees and converts 1.5 acres of broken concrete into green lawn. It creates three dedicated zones: inclusive playground (North), reading garden (Center), and vendor pavilion (South).

MUST COMMUNICATE

- 100% preservation of all 42 heritage oak trees
- Conversion of concrete into 1.5 acres of green lawn
- 3 distinct zones (Playground, Garden, Pavilion)
- Infrastructure repair focus without losing trees

"We just want a safe, green place where kids run while seniors sit in shade." — Elena R., Resident

Final Message: Restoring Oakridge Park's green heart while making it safe and usable for all.

DAY 04

Customer Support Lead — Issue Escalation Protocol

SCENARIO & OBJECTIVE

A support lead trains new agents on issue escalation protocols to stop agents from skipping Tier 2 and overloading software engineers with basic tickets.

AUDIENCE

Tier 1 Customer Support representatives and technical support leads.

CLIENT CONTENT

Engineers spent 140 hours last month on basic tickets because Tier 1 agents escalated directly to developers. Agents must follow a 3-tier path: 1) Search Knowledge Base & troubleshoot for 15 mins. 2) If unsolved, escalate to Tier 2 Tech Support via Slack #support-t2. 3) Only Tier 2 leads can open Jira bugs for Tier 3 Engineering. Never message developers directly.

MUST COMMUNICATE

- 3-tier escalation path structure
- 15-minute Tier 1 troubleshooting limit
- Strict rule against direct developer Slack tagging
- Channel protocols (#support-t2 & Jira ticket)

"Direct Slack tags mean critical security bug fixes get delayed for everyone." — Dave, Lead Architect

Final Message: Respecting the escalation path protects engineer focus and yields faster resolution.

Designer Freedom: Choose slide count, visual structure, layout, and interactive step-by-step process flows.

DAY 05

Fitness Coach — 8-Week Strength Transformation

SCENARIO & OBJECTIVE

A personal trainer briefs new gym members on what to expect during an 8-week strength program. Prepare clients for the "Week 3 strength plateau" so they don't drop out.

AUDIENCE

Beginner to intermediate gym members starting an 8-week strength program.

CLIENT CONTENT

People quit in Week 3 expecting linear progress every week. Progress comes in 4 two-week phases: Weeks 1–2 (Neuromuscular Adaptation: movement feels easier), Weeks 3–4 (Adaptation Plateau: neural gains level off, weight stalls while muscles repair), Weeks 5–6 (Hypertrophy Acceleration: visible muscle tone spikes), Weeks 7–8 (Peak Consolidation: testing baselines).

MUST COMMUNICATE

- Non-linear nature of body adaptation
- 4 distinct 2-week training phases
- Why the Week 3 plateau happens and why it's good
- Highest dropout window: Days 18–24

"When my weight stalled in Week 3, I thought I failed. By Week 6, I hit a PR." — Jason M., Client

Final Message: A plateau is not a wall; it's your body building foundation for your next breakthrough.

Designer Freedom: Choose slide count, visual structure, layout, and interactive milestone roadmaps.

DAY 06

Event Coordinator — Tech Summit Agenda & Logistics

SCENARIO & OBJECTIVE

An event coordinator presents logistics and multi-track schedules to speakers and sponsors of an international tech summit. Ensure seamless room transitions across 3 tracks.

AUDIENCE

Event sponsors, keynote speakers, and breakout workshop facilitators.

CLIENT CONTENT

1,200 attendees across 3 parallel tracks require stage timing precision. Morning keynotes run Main Stage 09:00–11:00. At 11:30, the summit splits: Main Stage (AI & Cloud), Hall B (Cybersecurity), Studio 3 (Product Design). Lunch is 13:00–14:15 in Central Atrium. Afternoon workshops run until 16:30. Speakers must check in 45 mins early; handoffs enforce a 10-min buffer.

MUST COMMUNICATE

- Key schedule milestones (09:00, 11:30, 13:00, 16:30)
- 3 venue locations (Main Stage, Hall B, Studio 3)
- 45-minute speaker lounge check-in rule
- 10-minute strict stage handoff buffer

"When a speaker runs over by 5 mins, 400 people miss breakout starts." — Aris T., Ops Lead

Final Message: Precision execution relies on timing discipline. Check in early and stick to your slot.

DAY 07

Tech Recruiter — Candidate Journey Optimization

SCENARIO & OBJECTIVE

A recruiter presents candidate funnel drop-off data to the VP of Engineering to justify changing the hiring process. Show that a 4-hour test is driving away senior developers.

AUDIENCE

VP of Engineering, Engineering Managers, and HR Director.

CLIENT CONTENT

We are losing top senior talent mid-funnel. Out of 150 applicants screened last quarter, 85 passed recruiter calls. But when sent our 4-hour take-home coding assessment, 58 candidates (68%) withdrew. Competitors using 60-minute pair-programming hire in 12 days; our time-to-hire is 42 days. We must replace the test with a 1-hour live coding session.

MUST COMMUNICATE

- Funnel bottleneck: 68% drop-off at take-home test
- Hiring velocity gap: 42 days vs. competitor 12 days
- Proposed fix: 1-hour live pair programming
- Impact on senior talent pipeline retention

"Senior devs won't spend 4 hours on a weekend test when holding 3 offers." — Maya, Tech Recruiter

Final Message: Our test isn't filtering weak developers—it's filtering out employed senior talent.

Designer Freedom: Choose slide count, visual structure, layout, and interactive candidate funnel reveals.

DAY 08

Operations Analyst — Fulfillment Bottleneck Analysis

SCENARIO & OBJECTIVE

An analyst presents a warehouse diagnostic to the logistics director to secure budget for automated packing stations. Demonstrate how packing stalls order delivery.

AUDIENCE

Director of Logistics and Warehouse Operations Management.

CLIENT CONTENT

Order processing times jumped from 22h to 46h, causing \$18,000 monthly late-shipment refunds. Audit of 500 orders shows: Picking (12m), Sorting (8m), Packing (24m), Staging (4m). Manual box sizing and taping during packing is the primary bottleneck, backing up 350 units daily. Installing 3 automated box-forming stations reduces packing to 6 minutes per order.

MUST COMMUNICATE

- Fulfillment duration increase (22h → 46h)
- Packing as core bottleneck (24m vs. 12m pick)
- Financial penalty (\$18k/mo refund costs)
- Automation impact (24m down to 6m pack time)

"Packers spend half their shift hunting box sizes and reloading manual tape." — Tom H., Shift Sup.

Final Message: Fixing packing cuts processing below 20h and eliminates refund penalties immediately.

Designer Freedom: Choose slide count, visual structure, layout, and interactive process flow comparisons.

DAY 09

Sales Representative — B2B Cloud CRM Pitch

SCENARIO & OBJECTIVE

An enterprise sales rep pitches a modern cloud CRM to an IT Director relying on a 15-year-old desktop CRM. Persuade them that cloud benefits outweigh migration downtime risks.

AUDIENCE

IT Director, Chief Technology Officer, and Head of Sales Operations.

CLIENT CONTENT

Your desktop CRM (installed 2011) feels safe because it's paid off, but it drains sales productivity and risks data loss. It requires manual backups, lacks mobile access, takes 14 clicks to log a meeting, and costs \$34k/year in maintenance. Our Cloud CRM offers automated backups, mobile apps, 1-click meeting logs, and migrates in 5 days with zero server downtime.

MUST COMMUNICATE

- Legacy deficiencies (Manual backup, no mobile, \$34k cost)
- Cloud CRM features (Auto-backup, mobile, 1-click log)
- Efficiency jump: 14 clicks down to 1 click
- Zero downtime 5-day automated migration bridge

"Reps spend 2 hours every Friday night manually entering calls on old servers." — Sales Ops Lead

Final Message: Legacy software isn't saving money; it's costing sales reps deal-making hours weekly.

Designer Freedom: Choose slide count, visual structure, layout, and interactive feature & risk matrices.

DAY 10

NGO Project Officer — Clean Water Impact Report

SCENARIO & OBJECTIVE

An NGO project officer presents a 12-month clean water impact report to corporate donors to secure renewal grants. Show tangible health and economic gains in rural villages.

AUDIENCE

Corporate Social Responsibility (CSR) directors and major donor representatives.

CLIENT CONTENT

12 months ago, Mabira families walked 3.5 hours daily for river water; 40% of clinic visits were waterborne illness. With your grant, we built 6 solar water kiosks across 3 villages. Today, water retrieval takes 12 minutes. Waterborne disease plummeted by 78%. School attendance among young girls rose 34% because they no longer spend mornings carrying water.

MUST COMMUNICATE

- Baseline hardship (3.5h walk, 40% clinic cases)
- Delivered infrastructure (6 solar water kiosks)
- Health impact (78% drop in waterborne illness)
- Social gain (+34% female school attendance)

"My daughters drink clean water and go to school instead of walking miles." — Grace A., Resident

Final Message: Your funding didn't just build pumps; it restored health and education for young women.

Designer Freedom: Choose slide count, visual structure, layout, and interactive metric dashboards.

DAY 11

UX Researcher — Mobile Banking App Usability

SCENARIO & OBJECTIVE

A UX researcher presents app usability findings to product executives pushing new features. Convince leadership to fix critical navigation bugs that cause transfer failures first.

AUDIENCE

Chief Product Officer, VP of Mobile Banking, and Engineering Leads.

CLIENT CONTENT

Executives want crypto widgets, but core banking is failing. Usability tests with 40 users showed 62% failed basic peer-to-peer money transfers on their first try. Users misinterpret the "Send Money" icon as a message inbox symbol. Also, 45% dropped out during confirmation due to unhelpful error messages, generating 2,400 monthly support calls.

MUST COMMUNICATE

- Core failure rate (62% fail peer-to-peer transfer)
- Friction points (Icon confusion & cryptic error messages)
- Support ticket impact (2,400 monthly calls)
- Recommendation: Fix core flow before new widgets

"I thought the icon was my message inbox. I almost sent \$200 wrong." — Usability Participant #14

Final Message: Adding new features onto a broken core experience will only drive users away faster.

Designer Freedom: Choose slide count, visual structure, layout, and interactive screen hotspot reveals.

DAY 12

Clinical Educator — Antibiotic Stewardship Brief

SCENARIO & OBJECTIVE

A clinical educator briefs physicians on antibiotic stewardship guidelines to curb superbug outbreaks. Persuade doctors to adopt targeted PCR diagnostics over broad-spectrum drugs.

AUDIENCE

Attending physicians, department heads, and senior clinical staff.

CLIENT CONTENT

Broad-spectrum prescribing rose 28% over two years, causing ICU C. diff infections to spike 18%. Doctors prescribe broad-spectrum drugs empirically while waiting 48 hours for lab cultures. Our new Stewardship Protocol mandates Rapid PCR diagnostics, delivering pathogen profiles in 3 hours. Targeted narrow-spectrum treatment reduces hospital stays by 2.4 days.

MUST COMMUNICATE

- Hospital infection risk (+28% broad-spectrum, +18% C. diff)
- Empiric prescribing root cause
- Rapid PCR diagnostic advantage (3h vs. 48h turnaround)
- Outcome improvement (-2.4 days hospital stay)

"PCR results in 3 hours let us target exact bacteria safely." — Dr. Aris, Infectious Disease

Final Message: Targeted prescribing is precise medicine that protects both patients and hospital immunity.

Designer Freedom: Choose slide count, visual structure, layout, and interactive diagnostic trees.

DAY 13

Higher Ed Consultant — First-Year STEM Retention

SCENARIO & OBJECTIVE

A strategist presents retention analysis to a university senate board facing STEM major dropouts. Explain why 32% of STEM freshmen drop out and propose targeted interventions.

AUDIENCE

University Chancellor, Deans of Engineering, and Student Affairs Directors.

CLIENT CONTENT

We lose 32% of STEM undergraduates before year two (\$4.2M lost revenue annually). Dropout is driven by two gateway courses: Calculus I and Physics 101 (>41% failure rate). Surveys show 71% of failing students never attended office hours due to lab schedule conflicts. Implementing mandatory peer study groups and flexible tutoring reclaims 65% of at-risk students.

MUST COMMUNICATE

- Financial & retention loss (32% dropout, \$4.2M loss)
- Gateway course bottleneck (Calculus I & Physics > 41% fail)
- Inaccessible office hours (71% miss due to lab overlap)
- Peer tutoring solution (65% recovery target)

"There was no tutoring available after my 5 PM lab. I felt alone." — Former STEM Student

Final Message: Students aren't failing STEM; our support system is inaccessible when needed.

Designer Freedom: Choose slide count, visual structure, layout, and interactive category accordions.

DAY 14

Real Estate Developer — Urban Center Proposal

SCENARIO & OBJECTIVE

A real estate director presents a mixed-use development proposal to a city planning commission. Address traffic and parking concerns while highlighting economic tax benefits.

AUDIENCE

City Planning Commissioners, Urban Transit Officials, and Public Stakeholders.

CLIENT CONTENT

"Grand Avenue District" transforms 12 abandoned industrial acres into 450 residential units and 60,000 sq ft of retail. To mitigate traffic concerns, we incorporate an underground 600-space automated garage, a dedicated Bus Rapid Transit terminal, and a 1-acre public plaza connecting to bike trails. Project yields \$3.8M annual property taxes and 220 jobs.

MUST COMMUNICATE

- Scope: 12 abandoned acres → 450 units + 60k retail
- Traffic mitigations: 600 subterranean spots + BRT
- Economic return: \$3.8M annual taxes, 220 jobs
- Community perk: 1-acre public plaza & bike link

"Converting railyards to housing with transit gives workers homes without traffic." — Consultant

Final Message: Delivering housing and municipal revenue without adding commuter gridlock.

Designer Freedom: Choose slide count, visual structure, layout, and interactive site plan overlays.

DAY 15

Financial Planner — Market Volatility Guide

SCENARIO & OBJECTIVE

A wealth manager presents a market volatility guide to pre-retirees panicking during a downturn. Reassure clients so they don't sell equity portfolios into cash at the bottom.

AUDIENCE

Pre-retiree retail investors (ages 55–65) with high net worth.

CLIENT CONTENT

Selling equities during downturns destroys long-term wealth. Over 50 years, the S&P 500 had 14 drops >15%; in 100% of cases, markets fully recovered within 19 months. Missing the 10 best trading days across 20 years cuts returns in half (9.8% → 4.5%). Our bucket strategy keeps 3 years of cash expenses liquid so equities have time to recover without forced selling.

MUST COMMUNICATE

- 100% historical recovery rate across 14 market drops
- 19-month average recovery timeframe
- Cost of panic: Missing 10 top days cuts return from 9.8% to 4.5%
- 3-year liquid cash bucket buffer protection

"I panicked in 2008 and moved to cash. It took 10 years to rebuild." — Client Retrospective

Final Message: Volatility isn't capital loss—it's the price of growth. Trust your bucket buffer.

Designer Freedom: Choose slide count, visual structure, layout, and interactive scenario toggles.

DAY 16

Brand Strategist — Footwear Brand Repositioning

SCENARIO & OBJECTIVE

A brand strategist pitches a visual overhaul for a 70-year-old footwear brand losing Gen Z relevance. Convince the board that eco-positioning attracts young buyers without losing loyalists.

AUDIENCE

Chief Executive Officer, Founders, Board of Directors, and Marketing VP.

CLIENT CONTENT

Vanguard Footwear's buyer age shifted from 34 to 58 over ten years; Gen Z brand awareness sits at just 12%. Gen Z demands eco-conscious materials and transparency. We propose transitioning positioning to "Built to Last, Made to Restore"—using 100% recycled soles and a trade-in program. Pilot tests show +310% Gen Z purchase intent while retaining 92% legacy loyalty.

MUST COMMUNICATE

- Demographic risk (Average buyer age shifted 34 → 58)
- Low Gen Z brand awareness (12%)
- New core pillar ("Built to Last, Made to Restore")
- Pilot validation (+310% Gen Z intent, 92% retention)

"I didn't know Vanguard made anything relevant until I saw the recycled line." — Gen Z Participant

Final Message: Repositioning applies our craftsmanship toward eco-conscious values of tomorrow.

Designer Freedom: Choose slide count, visual structure, layout, and Morph-based visual evolution journeys.

DAY 17

Cybersecurity Officer — Phishing Defense Brief

SCENARIO & OBJECTIVE

A CISO presents internal phishing drill audit results to department managers. Motivate leaders to enforce cyber vigilance after testing revealed high staff vulnerability.

AUDIENCE

Department Heads, Team Leads, and Operations Managers across all units.

CLIENT CONTENT

A simulated phishing drill sent to 1,200 staff revealed alarming gaps: 24% clicked a fake HR payroll link, and 11% entered credentials. Finance and Sales failed most. Real ransomware breaches average \$2.2M in damages. We are deploying a mandatory "Spot the Red Flags" protocol targeting sender domains, urgent language, and unverified attachments.

MUST COMMUNICATE

- Drill failure rates (24% clicked link, 11% gave credentials)
- Most vulnerable units (Finance and Sales)
- Financial vulnerability (\$2.2M avg breach cost)
- Red flag training (Domains, urgency, attachments)

"The email looked so real I didn't check the domain before typing my password." — Account Mgr

Final Message: Firewalls alone cannot protect us. Our best defense is an alert, trained team.

Designer Freedom: Choose slide count, visual structure, layout, and interactive "Spot the Red Flags" quizzes.

DAY 18

Supply Chain Manager — Microchip Risk Brief

SCENARIO & OBJECTIVE

A supply chain director briefs executives on semiconductor shortages. Persuade leadership to approve a dual-sourcing strategy that increases unit cost by 4% to prevent shutdowns.

AUDIENCE

Chief Executive Officer, Chief Financial Officer, and Operations VP.

CLIENT CONTENT

We rely on a single Taiwan supplier for 85% of controller chips. Shipping delays expanded lead times from 8 to 34 weeks, creating a 60-day stockout risk in Q3. Assembly shutdowns cost \$110,000/day. We evaluated 3 routes: Route A (Status quo), Route B (12mo stockpile), and Route C (Dual-sourcing European supplier). Route C adds 4% unit cost but guarantees 10-day delivery.

MUST COMMUNICATE

- 85% single-supplier dependency vulnerability
- Lead time blow-out (8 weeks → 34 weeks)
- Cost of stoppage (\$110,000 per idle day)
- Endorsing Route C (Dual-sourcing with 10-day lead time)

"Saving 4% means nothing if factory lines sit frozen for 2 months." — Factory Ops Director

Final Message: Investing 4% in dual-sourcing is cheap insurance against factory paralysis.

DAY 19

Career Coach — Director-to-VP Leadership Roadmap

SCENARIO & OBJECTIVE

An executive coach delivers a workshop to Senior Managers aiming for VP roles. Help leaders understand the shift from tactical execution to strategic influence.

AUDIENCE

Newly appointed Senior Managers and Associate Directors across business units.

CLIENT CONTENT

What got you promoted to Manager holds you back from becoming Vice President. Managers focus on Tactical Execution (doing tasks, solving daily output). Executives focus on Strategic Influence (aligning cross-functional priorities, risk management, enterprise vision). 78% of rejected VP candidates fail because they remain stuck in operational micromanagement.

MUST COMMUNICATE

- The Manager vs. Executive performance paradox
- Shift from Tactical Execution to Strategic Influence
- 78% VP failure rate due to operational micromanagement
- 4 core capability quadrants for executive readiness

"Solving team bugs didn't prove I was ready for VP; it showed I micromanaged." — Marketing VP

Final Message: Stop proving you can do the work. Start demonstrating you can build the team and vision.

Designer Freedom: Choose slide count, visual structure, layout, and interactive 4-quadrant skill matrices.

DAY 20

Environmental Scientist — Microplastic Study

SCENARIO & OBJECTIVE

A scientist presents toxicological data to a parliamentary committee advocating for single-use plastic regulations. Translate complex marine data into an urgent public health story.

AUDIENCE

Members of Parliament, Policy Advisors, and Environmental Officials.

CLIENT CONTENT

Microplastics are a bioaccumulative health crisis. Our 3-year coastal study found plankton ingest 42 fibers per organism, forage fish accumulate 310 particles, and apex commercial fish (Tuna/Salmon) contain 1,840 particles/kg. Most critically, human blood tests detected microplastics in 79% of subjects, linked to cellular inflammation.

MUST COMMUNICATE

- Bioaccumulation across ocean food chains
- Particle accumulation rates (42 → 310 → 1,840/kg)
- 79% human blood sample contamination rate
- Urgent call for single-use plastic legislative bans

"Microplastics aren't just in water; they're on dinner plates and in blood." — Lead Toxicologist

Final Message: Microplastics bioaccumulate into human bodies. Regulation cannot wait.

Designer Freedom: Choose slide count, visual structure, layout, and ecosystem layer drill-downs.

DAY 21

Product Manager — SaaS AI Rollout Strategy

SCENARIO & OBJECTIVE

A Product Manager presents an AI feature integration plan to engineering and sales leads. Align teams on a tiered release rollout to control API costs and hallucination risks.

AUDIENCE

Engineering Leads, UX Designers, Sales Directors, and Product Marketers.

CLIENT CONTENT

Adding generative AI summarization creates market differentiation, but shipping unverified AI risks hallucination errors and compute cost spikes. We plan a 3-tier rollout over 9 months: Tier 1 (Month 2 Internal Beta), Tier 2 (Month 5 Pro Tier with human approval), Tier 3 (Month 9 Enterprise Suite). Compute costs must stay capped at \$0.04/query to protect 78% margins.

MUST COMMUNICATE

- Balancing AI differentiation vs. API compute costs
- 3-tier progressive rollout sequence (Months 2, 5, 9)
- Feature scope per tier (Beta, Pro, Enterprise)
- \$0.04 query cost cap to preserve 78% gross margin

"A tiered rollout gives sales demo tools while engineering protects accuracy." — Lead Architect

Final Message: A disciplined AI rollout protects customer trust and profit margins simultaneously.

Designer Freedom: Choose slide count, visual structure, layout, and interactive tiered matrix timelines.

DAY 22

Church Leader — Community Center Capital Campaign

SCENARIO & OBJECTIVE

A pastor presents a \$1.5M capital campaign to a divided board. Unite leadership behind funding a community youth/food center alongside necessary sanctuary repairs.

AUDIENCE

Church Board Members, Finance Committee, and Community Stakeholders.

CLIENT CONTENT

Our board is split: half wants all \$1.5M spent fixing our sanctuary roof/HVAC, while half wants to build a youth food pantry. Local surveys show 42% of local families face food insecurity, and youth crime spikes 35% between 3–7 PM. Our dual proposal allocates \$600k to essential roof repairs and \$900k to build a Community Outreach Center.

MUST COMMUNICATE

- Dilemma: Facility repairs vs. community mission
- Local need data (42% food insecurity, 35% youth crime)
- Balanced allocation (\$600k repairs / \$900k center)
- Unifying stewardship with local community outreach

"A pristine sanctuary roof means nothing if our neighbors are hungry." — Outreach Director

Final Message: Healthy stewardship honors our roof while opening our doors to those in need.

Designer Freedom: Choose slide count, visual structure, layout, and interactive needs map overlays.

DAY 23

CISO — Zero-Trust Security Business Case

SCENARIO & OBJECTIVE

A CISO presents a \$1.8M Zero-Trust Migration business case to the board after a competitor's breach. Convince directors to approve a 2-year infrastructure overhaul.

AUDIENCE

Board of Directors, Audit Committee, and Chief Risk Officer.

CLIENT CONTENT

A ransomware attack on our rival caused a 14-day outage, \$12M direct loss, and a 22% stock drop because they relied on traditional perimeter security. We use the same perimeter model. We propose migrating to Zero-Trust ("Never Trust, Always Verify"). The \$1.8M budget spans 3 six-month phases: MFA/Identity, Micro-segmentation, and AI Threat Response—cutting breach risk by 85%.

MUST COMMUNICATE

- Perimeter risk (Competitor's \$12M loss & 14-day downtime)
- Zero-Trust core pillar ("Never Trust, Always Verify")
- 3 six-month execution phases over 2 years
- ROI justification: \$1.8M cost cuts breach exposure 85%

"Perimeter security is a castle with a moat but no locks on internal doors." — Security Briefing

Final Message: Zero-Trust guarantees business continuity when perimeter defenses fail.

Designer Freedom: Choose slide count, visual structure, layout, and interactive phase rollout maps.

DAY 24

HealthTech Founder — Series A Venture Pitch

SCENARIO & OBJECTIVE

A HealthTech founder pitches VCs for \$6M to scale an AI cancer diagnostic platform. Prove high diagnostic accuracy, FDA regulatory pathways, and rapid hospital adoption.

AUDIENCE

Venture Capital Investment Committee Partners and Healthcare Angels.

CLIENT CONTENT

Pathologists take 4 days to analyze tissue slides, with 14% early diagnostic errors due to overload. PathologyAI analyzes biopsy slides in 45 seconds with 98.2% diagnostic sensitivity. Clinical trials across 12 hospitals analyzed 45,000 slides. SaaS business model (\$15/scan fee). TAM is \$8.4B globally, SAM \$2.1B, target SOM \$180M. FDA 510(k) on track for Q4.

MUST COMMUNICATE

- Diagnostic delay & error problem (4 days, 14% error)
- Product performance (45 seconds, 98.2% sensitivity)
- Market opportunity (TAM \$8.4B, SAM \$2.1B, SOM \$180M)
- Clinical validation (12 hospitals, 45k samples, FDA Q4)

"Waiting 4 days for pathology feels like forever; we give answers in 45s." — Founder/CMO

Final Message: PathologyAI combines lifesaving diagnostic speed with a scalable SaaS business model.

DAY 25

Urban Transit Director — Bus Rapid Transit Corridor

SCENARIO & OBJECTIVE

A transit director presents a BRT lane conversion to business owners at a city hearing. Defuse backlash over losing parking by showing that dedicated bus lanes drive customer traffic.

AUDIENCE

City Council Members, Local Merchants, and Urban Commuters.

CLIENT CONTENT

Merchants protest converting 120 curbside parking spots on Main Street into bus lanes, fearing lost sales. But traffic surveys reveal only 18% of shoppers arrive by car, while 64% arrive via transit or walking. Main Street buses currently crawl at 6 mph. The BRT conversion speeds bus velocity to 19 mph, expands capacity from 1,200 to 4,800 passengers/hour, and adds loading zones.

MUST COMMUNICATE

- Debunking parking myth (64% transit/walk vs 18% car)
- Speed & capacity gain (6 → 19 mph; 1.2k → 4.8k pax/h)
- Merchant trade-off: Cross-street delivery loading zones
- Net economic gain of quadrupled pedestrian capacity

"Once the rapid bus line opened, daily foot traffic in my store rose 40%." — Local Retailer

Final Message: Main Street isn't losing parking; it's gaining 3,600 potential shoppers every hour.

Designer Freedom: Choose slide count, visual structure, layout, and interactive corridor comparisons.

DAY 26

Hospital CMO — Emergency Department Redesign

SCENARIO & OBJECTIVE

A hospital CMO presents an Emergency Department redesign to trustees. Convince the board to fund a triage overhaul to eliminate wait times and patients leaving without being seen.

AUDIENCE

Board of Trustees, Health System CEO, CFO, and Nursing Leadership.

CLIENT CONTENT

8.4% of ER patients (4,200 people/year) left without being seen (LWBS) due to 5-hour wait times, creating liability risk and \$6.1M lost revenue. Non-emergent cases (Levels 4 & 5) choke acute trauma bays. We propose a "Split-Flow Triage Model": routing low-acuity cases to a Fast-Track Clinic while acute trauma goes to acute bays. Simulation shows wait times cut from 310m to 45m.

MUST COMMUNICATE

- Clinical & financial crisis (8.4% LWBS, \$6.1M loss)
- Triage bottleneck: Minor cases choking trauma beds
- Split-Flow solution (Fast-Track Clinic vs. Acute Entry)
- Target outcomes: Wait time down from 310m to 45m

"Minor cuts sat for 6 hours next to severe chest pain cases until walking out." — Charge Nurse

Final Message: Redesigning triage transforms our ER into a fast, safe care engine.

Designer Freedom: Choose slide count, visual structure, layout, and interactive patient flow simulations.

DAY 27

M&A Consultant — Post-Merger Fintech Integration

SCENARIO & OBJECTIVE

An M&A consultant presents post-merger strategy after a bank acquired a fintech startup. Adopt a dual-track integration model to prevent developer turnover and system outages.

AUDIENCE

Chief Executive Officer, Chief Risk Officer, Head of HR, and Managing Directors.

CLIENT CONTENT

90 days after acquiring PayPulse for \$340M, developer turnover hit 35% due to rigid bank protocols. Forcing PayPulse APIs into the bank's mainframe caused 3 major outages. We present a "Dual-Track 100-Day Integration": Track A keeps PayPulse developers in an autonomous Innovation Unit. Track B builds a secure API Middleware layer over 12 months.

MUST COMMUNICATE

- Integration failure signals (35% turnover, 3 major outages)
- Failure of forced immediate cultural assimilation
- Dual-Track solution (Autonomous Unit + Middleware API)
- 100-day execution targets (>90% talent retention)

"When developers forced to fill 12-page forms for minor fixes, they leave." — Startup CTO

Final Message: Don't crush the agility you spent \$340M to acquire. Build an API bridge.

Designer Freedom: Choose slide count, visual structure, layout, and interactive synergy matrices.

DAY 28

Sustainability Director — Scope 3 Decarbonization

SCENARIO & OBJECTIVE

A Sustainability Director presents a Scope 3 decarbonization strategy to executive management and suppliers. Align global vendors around mandatory carbon targets by 2030.

AUDIENCE

Chief Operating Officer, Global Procurement Directors, and Tier-1 Manufacturers.

CLIENT CONTENT

Scope 1 and 2 account for only 12% of carbon footprint; 88% lies in our Scope 3 supply chain. EU regulations impose fines up to 5% global turnover for non-compliance by 2028. Our "Supplier Decarbonization Program" requires Tier-1 suppliers to adopt 100% renewable electricity within 24 months. In return, we co-fund 30% of solar setup costs. Non-compliant suppliers will be phased out.

MUST COMMUNICATE

- 88% Scope 3 emissions vs. 12% direct operational footprint
- EU non-compliance fines up to 5% global annual turnover
- 100% renewable shift mandated within 24 months
- Carrot & Stick: 30% capital co-funding vs. vendor removal

"We couldn't afford solar setups without capital co-funding." — Manufacturing Partner

Final Message: Decarbonizing supply chains is a hard commercial requirement for market access.

Designer Freedom: Choose slide count, visual structure, layout, and carbon footprint waterfall charts.

DAY 29

Architectural Director — Cultural Center Adaptive Reuse

SCENARIO & OBJECTIVE

An Architectural Principal presents an adaptive reuse design for a 110-year-old textile mill to a landmark preservation board. Win approval for adding glass structures to historic brickwork.

AUDIENCE

Historic Preservation Board Members, City Historians, and Planning Officials.

CLIENT CONTENT

St. Jude Textile Mill has stood vacant 25 years. Restoring exterior brickwork costs \$14M—unviable without adding commercial space. Our concept preserves 100% of original brick facades, timber beams, and clock tower. To make it viable, we introduce a glass atrium cantilevered over the rear courtyard. Thermal surveys show the canopy shields crumbling brickwork from water erosion.

MUST COMMUNICATE

- \$14M restoration cost requires commercial monetization
- 100% retention of historic brick, timber, and clock tower
- Glass cantilever contrast concept
- Glass canopy shields historic brickwork from erosion

"If we wrap it in plastic as a relic, it collapses. Modern glass protects brick." — Architect

Final Message: Modern design does not alter history; it protects historic brick under a glass canopy.

Designer Freedom: Choose slide count, visual structure, layout, and spatial cross-section overlays.

DAY 30

Legal Compliance Officer — Global AI Governance

SCENARIO & OBJECTIVE

A Director of Regulatory Affairs presents an AI Act compliance framework to the board. Secure executive approval for a risk framework to protect the firm from global regulatory fines.

AUDIENCE

Chief Executive Officer, Chief Legal Officer, Head of AI Research, and Board of Directors.

CLIENT CONTENT

Global AI Act enforcement starts in 180 days across 12 operating markets. Non-compliance penalties reach €35M or 7% global turnover (~\$140M risk). Audit of our 24 active AI models found 4 high-risk systems (biometric processing & credit scoring) lacking audit logging, bias mitigation, and human overrides. We outline a 4-Stage AI Risk Execution Framework.

MUST COMMUNICATE

- €35M or 7% global turnover fine (~\$140M exposure risk)
- 180-day deadline across 12 national jurisdictions
- 4 High-Risk models out of 24 active commercial AI tools
- Missing compliance mandates: Audit logs, bias testing, human overrides

"Building AI fast was our metric; now audited human-guided AI is our legal license." — AI Ethics Lead

Final Message: AI governance is the fundamental license that allows us to deploy AI legally worldwide.
